AB A method of delivering a drug composition comprises providing a carrier
having a phosphatidylcholine component and a drug entrapped therein, and
applying the composition to the skin for transdermal delivery of the drug,
wherein the composition is stable at room temperature.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates to compns. and methods for transdermal drug delivery comprising formulating a phosphatidylcholine carrier composition containing the drug and applying the composition to the skin. Biol. active peptides are encapsulated in the phosphatidylcholines, preferably soybean lecithin and formulated with crystallized phosphatidylcholines for the topical application. For example, a com. available phosphatidylcholine (HAY-6729) was mixed with methylparaben and emulsified. To this were slowly added Dow Corning Fluid 200-5 and Dow Corning Fluid 190. Prior to topical application, insulin was added at the level of 3.8 mg/mL to provide about 100 insulin units per mL.
